

Studieplan 2010/2011

Master of Science in Information Security

Studieprogramkode

MIS

Innledning

Information technology permeates all aspects of society and has become critical to industry, government, and individual well-being. Securing these vital services and structures and the availability of trustworthy information whenever and wherever it is required has become both an area of intensive research and also of burgeoning commercial activity. A master of science in information security will provide the students with the knowledge and theoretical background as well as with the requisite skills and attitudes to succeed in this challenging yet eminently rewarding field.

[Go to course table](#)

Studiets varighet, omfang og nivå

This is a two-year master program (120 ECTS credits) which is also available part-time over three or four years. The degree awarded upon completion is “Master of Science in Information Security”.

The program has three tracks: management, technology and digital forensics. Students have to choose which track they pursue when entering the program (see the course structure below).

The program qualifies students to proceed to Ph.D. studies.

Forventet læringsutbytte

Upon completion of the programme, the students will have a solid understanding of the interdisciplinary field of information security. The graduated students will be proficient in core topics such as security management, computer and network security, incident responds and forensics, and will be able to understand the critical information infrastructures and the security aspects of important IT services which society depends on. The students will also have gained a particular in-depth understanding of either technology, forensics or management issues dependent on their chosen programme track.

The students will be capable of discussing main questions and issues in scientific thinking and will be able to frame research problems and questions. They will have experience in planning and conducting a scientific project and in documenting the results and scientific contributions in the form of a scientific report (through their master thesis).

Målgruppe

There are three focus groups for this study programme:

1. Undergraduate students entering the programme as a continuation of their bachelor degree without any prior work experience.
2. Industry students (or students in private/public sector in general) looking for a full-time or part-time masters programme which is flexible and can be adapted to their employers needs and their own

individual needs.

3. International students: full-time, part-time or exchange students arriving for only single semesters.

Opptakskrav og rangering

Applicants must have a bachelor degree in computer science or a related subject to qualify for admission. The applicants must document that they have at least 10 ECTS credits in mathematics/statistics and at least 60 ECTS credits in computer science subjects. A grade point average (GPA) of C is required. It is expected that within these credits the following topics have been covered:

- Structural and object-oriented programming
- Algorithms and data structures
- Databases and XML
- Software engineering
- Computer network (Data communication)
- Operating systems and computer architecture

Students who have not had a dedicated course in each of these topics need to be prepared for some extra studying when entering topics that require background knowledge with which they are not sufficiently familiar beforehand.

Graduate studies in information security require a somewhat different mathematical platform than the one included in most bachelor studies. To master the theoretical topics included in the master programme we therefore recommend that the students attend the preparatory courses in number theory and theoretical computer science offered during the first weeks of the fall semester.

Studiets innhold, oppbygging og sammensetning

The programme is offered in a flexible manner to fit well to all the three target groups of students. In general, on campus presence is *required* only three times per semester (1-3 days each time), for a start-up session, for mid-term exams/presentations (and a start-up session of second part of the semester) and for final exams/presentations. Attendance is also strongly recommended for the *initial first two weeks of the programme when two preparatory intense short-courses in number theory and theoretical computer science are offered*. All courses are available online, but there will also be sessions on a regular weekly or bi-weekly schedule. The presence on these sessions is not required.

[More details for the upcoming year of study will be given here:](#)

The program has three tracks (paths of study): management, technology and digital forensics. Students have to choose which track they pursue when entering the programme. Common to all three tracks are a set of courses covering the core topics in both information security technology, forensics and management: introduction to cryptology, applied information security, network security, IT governance, information society and security, and legal aspects of information security. In addition, each track has a set of specific courses and the students have to choose at least 15 credits of courses from the track-specific pool of electives. Students also have to choose their master thesis topic within their chosen track.

Ordinary mandatory courses from the other track of the programme and courses from the masters programme in media technology and the CIMET (Color in Informatics and Media Technology) master can be included as electives. Students can also use *up to 20 ECTS of courses at the 3000 level* as part of their master programme, and are particularly encouraged to browse the course offerings of the

bachelor programmes in network and system administration, software engineering, and economics and management. Some of the courses listed above can also be mobile in time, space and teaching format upon request by students (typically a course can be taken in a different semester through self-study and individual or group supervision).

Master-level courses from other institutions can be included as electives or can substitute for mandatory courses at the discretion of the programme director.

The course structure for part-time students can be composed individually as long the track-specific requirements mentioned above and any course interdependencies are respected. The most important course interdependencies are the following: 1. Students should enter their master thesis in the semester following the research project planning course, 2. All previous course work has to be completed before entering the master thesis (an exception of 10 credits missing can be made at the discretion of the master thesis instructor, but only if the missing credits are not relevant for the topic of the master thesis).

Students entering the programme from the bachelors programme in information security will be offered greater flexibility in the course structure due to potential overlap with some of the contents in the bachelors programme.

Study methods

Lectures
Exercises
Project work
Essay/Article writing
Independent study
Group exercises
Lab exercises

Tekniske forutsetninger

Students, who choose to participate in the study program on distance, need a relatively new computer and a broadband Internet connection. Software that is needed is mostly freely available on the Internet. In some courses commercial products, such as MatLab, are required.

For practical computer skills, it is expected that students can use any common operating system (GNU/Linux, Microsoft Windows, MacOS or Solaris) both with a graphical user interface and a command line interface.

Students who have not had a dedicated course on each of these topics should not worry, they just need to be prepared for a little bit of extra studying when entering topics that require background knowledge with which they are not sufficiently familiar beforehand.

Graduate studies in information security requires a somewhat different mathematical platform than the one included in most bachelor studies. To master the theoretical topics included in the master programme we therefore recommend that you attend the preparatory courses in number theory and theoretical computer science offered during the first two weeks of the fall semester.

Sensorordning

Most courses have internal examiner. The master thesis always has an external examiner.

Internasjonalisering

Students can travel abroad to do their master thesis. The information security group has strong links to many of the leading international academic groups within the field, and students are encouraged to contact their instructor in the course «research project planning» to ask for relevant travel opportunities.

IMT4651 Security as Continuous Improvement - 2010-2011

Emnekode:

IMT4651

Emnnavn:

Security as Continuous Improvement

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Andre halvdel av semesteret

Språk:

Engelsk

Forutsetter bestått:

IMT4661 - Security Management Dynamics

Forventet læringsutbytte:

Already the BS7799/ISO17799 standards encouraged viewing security as quality improvement. Some years later and after the extensions to the ISO27000 family, security as a continuous improvement process is not yet a mainstream activity.

The emphasis of this course is on identifying the systemic obstacles in the implementation path of continuous improvement of processes (“the quality improvement paradox”). Then, to apply this insights to redesign security management to achieve continuous improvement.

Emnets temaer:

The quality improvement paradox

Security and quality improvement processes

Improving the Performance of Computer Security Incident Response Teams (CSIRTs)

Incident reporting systems and Learning from incidents

Security risks in the transition to Integrated Operations

Security-dependent safety. Continuous improvement of security in Critical Infrastructure

Pedagogiske metoder:

Forelesninger

Oppgaveløsning

Prosjektarbeid

Pedagogiske metoder (fritekst):

Web-enabled course with forum

Vurderingsformer:

Flervalgstest(er)

Vurdering av prosjekt(er)

Vurderingsformer:

- Two multiple choice exams counting each 15%
- Two individual projects (papers) counting each 35%
- Each part must be individually approved of

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by the lecturer

Utsatt eksamen (tidl. kontinuasjon):

The whole subject must be repeated

Tillatte hjelpebidrifter:**Obligatoriske arbeidskrav:**

The course requires active participation in projects – both in class and outside class.

Hands-on modelling exercises during class are best carried out in computer lab.

Students are encouraged to bring laptops to the classroom.

Ansvarlig avdeling:

Avdeling for informatikk og medieteknikk

IMT4661 Security Management Dynamics - 2010-2011

Emnekode:

IMT4661

Emnnavn:

Security Management Dynamics

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Første halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:

The emphasis of this course is on the *dynamics* of security management. This is a much neglected aspect that it is becoming increasingly important.

Security is a highly interdisciplinary challenge, involving Man, Technology and Organization – the famous MTO challenge. Some people would add Economics as a new and important aspect.

Addressing the dynamics of security management provides several bonuses:

- Understand why many managers fail to achieve a satisfactory state of security;
- understand why some important security failures occur as unintended side-effects of management actions;
- and others, such as the increasing importance of employing System Dynamics to manage dynamic complexity.

Emnets temaer:

Foundations – Security standards from the perspective of change and dynamics

Introduction to qualitative system dynamics: Causal loop diagrams; System archetypes

Modelling security management dynamics using system archetypes and causal loop diagrams

Introduction to quantitative system dynamics: Causal structure and dynamic behaviour. Introduction to stocks and flows. Time delays.

Basic system dynamics models of security management.

Emnnavn:

Vitenskapelige metoder

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Språk:

Engelsk

Forventet læringsutbytte:

Etter endt emne skal studenten kjenne til og kunne drøfte sentrale spørsmål og problemstillinger innen vitenskapsteori. Studenten skal etter endt emne være i stand til å definere en vitenskapelig problemstilling, kunne planlegge gjennomføringen av et vitenskapelig arbeid og kunne rapportere resultater fra vitenskapelige prosjekter.

Emnets temaer:

- Introduksjon til vitenskapsteori
- Hva kjennetegner god forskning
- Forskningsetikk
- Kvantitative og kvalitative forskningsdesign
- Hva karakteriserer gode problemstillinger og hvordan lager man en?
- Litteraturstudier
- Metodevalg, inkludert planlegging, gjennomføring, og analyse av eksperimenter/studier.
- Behandling av data/statistikk
- Utarbeidelse av prosjektplan
- Gjennomføring av risikoanalyse og gjennomførbarhetsanalyse
- Tekniske rapporter, oppbygging og innhold

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Andre halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:

Students who have passed this course should:

- have acquired good knowledge of the common terminology in information security
- have working knowledge of security analysis methods
- have a good understanding of selected attack mechanisms and techniques and their employment by malicious software
- have working knowledge of database security
- have good understanding of design principles for secure information systems

Emnets temaer:

- Core terminology for information security
- Authentication and authentication techniques
- Security analysis methods
- Design principles for secure information systems
- Case studies of secure system design
- Database security
- Attack mechanisms and techniques
- Malicious software

IMT4571 IT Governance - 2010-2011

Emnekode:

IMT4571

Emnnavn:

IT Governance

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Andre halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:

Calder and Watkins define IT Governance as "the framework for the leadership, organizational structures and business processes, standards and compliance to these standards, which ensures that the organization's information systems support and enable the achievement of its strategies and objectives". IT Governance is of crucial importance for organizations owing to the need to best safeguard critical information and, through the increasing requirements from national and international regulations. Central to IT Governance in Europe is the ISO 27001 / ISO 27002 standard.

This course provides an overview of IT Governance and the basic concepts of the ISO 27001 / ISO 27002 standard.

The candidate should after attending the course

- fully understand the main principles of IT Governance.
- fully understand the basic concepts of the ISO 27001 / ISO 27002 standard
- master the principles for designing & implementing an ISO 27001 ISMS
- be fully aware of the difference between security technology and the management of secure systems
- have a thorough understanding of security management as a continuous improvement process.
- possess awareness of security certification schemes (BS7799, ISO 15408, ...)

Emnets temaer:

- Reasons for IT Governance: Compliance, liability, stability
- Organizing information security
- Information security policy and scope
- The risk assessment and statement of applicability
- Identification of risks related to external parties
- Asset management
- Human resources security
- Physical and environmental security
- Equipment security
- Communications and operations management
- Controls against malicious software (malware) and back-ups
- Network security management and media handling
- Exchanges of information
- Electronic commerce services
- E-mail and internet use
- Access control
- Network access control
- Operating system access control
- Application access control and teleworking
- Systems acquisition, development and maintenance
- Cryptographic controls
- Security in development and support processes
- Monitoring and information security incident management
- Business continuity management
- Compliance
- Principles of auditing

Pedagogiske metoder:

IMT4591 Rettslige aspekter ved informasjonssikkerhet - 2010-2011

Emnekode:

IMT4591

Emnenavn:

Rettslige aspekter ved informasjonssikkerhet

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Språk:

Norsk, alternativt engelsk

Forventet læringsutbytte:

Etter fullført emne skal studentene være i stand til å redegjøre for rettslige forhold som er særlig relevante for arbeidet med informasjonssikkerhet. Dette gjelder spesielt den rettslige reguleringen av forhold som har betydning for ivaretakelse av konfidensialitet, integritet, tilgjengelighet og kvalitet.

Emnets temaer:

Generelle bestemmelser om informasjonssikkerhet, særlig innenfor e-forvaltning

Sikring av personopplysninger ved innsamling, bearbeiding og lagring av opplysninger

Regler for elektronisk kommunikasjon

Pedagogiske metoder:

Forelesninger

Gruppearbeid

Oppgaveløsning

Vurderingsformer:

Skriftlig eksamen, 3 timer

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Intern + ekstern sensor

Utsatt eksamen (tidl. kontinuasjon):

Ordinær kontinuasjon

Tillatte hjelpeemidler:

Ansvarlig avdeling:

Avdeling for informatikk og medieteknikk

Klar for publisering:

Ja

IMT4841 Security Planning and Incident Management - 2010-2011

Emnekode:

IMT4841

Emnnavn:

Security Planning and Incident Management

Faglig nivå:

Master (syklus 2)

Studiepoeng:

10

Varighet:

Vår

Språk:

Norsk, alternativt engelsk

Forventet læringsutbytte:

Studenten skal etter endt emne være i stand til å utarbeide policier og prosedyrer for beredskapsplaner, samt lede planleggingsprosessen. Studenten må derfor oppnå god forståelse av hvorfor hendelsesrapporteringssystemer bør være på plass, hvordan de fungerer og hvordan man planlegger og gjennomfører etterforskning. Videre bør studenten ha god oversikt over kjente problemer innen hendelsesrapporteringssystemer. Studenten bør også være i stand til å planlegge for og håndtere større og mindre katastrofer. I forbindelse med katastrofer må studenten også ha oversikt over hvordan man planlegger for å holde driften i gang.

Emnets temaer:

1. Introduction and Overview of Contingency Planning
2. Planning for Organizational Readiness: Risk management, limits to risk management, incident reporting systems, business impact analysis
3. Incident Response: Preparation, organization, prevention, detection, notification, reaction, recovery, maintenance, operational problems for CSIRTS and organizational models for CSIRTS
4. Disaster Recovery: Preparation, implementation, operation and maintenance
5. Business Continuity: Preparation, implementation, operations and Maintenance
6. Crisis Management and Human Factors

Pedagogiske metoder:

Forelesninger

Prosjektarbeid

Vurderingsformer:

Skriftlig eksamen, 3 timer

Vurdering av prosjekt(er)

Vurderingsformer:

Totalvurdering bestående av 100 poeng hvorav 50 poeng kan oppnåes på prosjektarbeide og 50 poeng (minst 18 MÅ oppnås) på avsluttende 3-timers eksamen. Omregning fra 100-poengskala til A-F-skala skjer i henhold til anbefalt omregningstabell, men emneansvarlig kan i spesielle tilfeller gjøre små justeringer av grenser for å sikre overenstemmelse med de kvalitative beskrivelsene på A-F-skalaen.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Ekstern sensurering

Utsatt eksamen (tidl. kontinuasjon):

Ordinær kontinuasjon på skriftlig eksamen

Tillatte hjelpeemidler:**Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):**

Ordbok: Engelsk-Norsk eller Engelsk til annet språk

Obligatoriske arbeidskrav:

Et prosjekt må gjennomføres (eksamensprosjektet).

IMT4481

Emnnavn:

Information Society and Security

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Varighet (fritekst):

Første halvdel av semesteret.

Språk:

Engelsk

Forventet læringsutbytte:

Studentene skal primært forstå hvorfor utviklingen de siste ti årene innen IKT har ført til et meget sårbart samfunn og hva denne sårbarheten består i. De skal få nok forståelse i emnet til at de kan identifisere, vurdere verdien av og iverksette tiltak til beskyttelse av bedrifter og foretak.

Dette omfatter forståelse for:

- hvordan IKT-systemer er bygget opp og inngår i industriell produksjon, i offentlig og privat tjenesteyting, i offentlig administrasjon og i samfunnets infrastruktur
- hvorfor IKT-sytemer og administrativ infrastruktur kan beskrives som skalafrie nettverk, og hva dette har å si for sårbarhet og robusthet
- klassisk pålitelighetsteori, inklusivt pålitelighet av programvare og nettverk.

Emnets temaer:

- Innføring i begrepet risiko slik det er brukt i teknologi, forsikring og finans.
- Årsaker som bidrar til øket risiko: overoptimistisk fokus på markedsvekst, manglende tallforståelse og innsikt i statistikk og sannsynlighetsregning og teoriene til Kahneman og Tversky (forankring og prospektteori).
- Oppbygning og virkemåte av distribuerte IKT-systemer, herunder telekommunikasjonsteknologi og distribuert prosessering.
- Klassisk pålitelighetsteori for maskinvare og programvare.
- Teorien for tilfeldige (random) grafer (nettverk) og deres egenskaper med særlig vekt på egenskapene til skalafrie grafer.
- Sentrale begreper fra kombinatorisk kompleksitet og beregnbarhet gjennomgås.
- Identifisering av skalafrie nettverk i samfunnet (tekniske, administrative og sosiale) og deres betydning for samfunnets sårbarhet.

Pedagogiske metoder:

Forelesninger

IMT4601

Emnnavn:

Research Project Planning

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Vår

Varighet (fritekst):

The course is offered in the autumn. However, for the spring semester, students can do the course as supervised self study without any lectures, subject to the availability of a supervisor.

Språk:

Engelsk

Forutsetter bestått:

IMT 4421 Scientific methodology

Forventet læringsutbytte:

The Pre-project shall prepare the students to complete their master thesis on time, and with the expected quality.

The course contributes towards the following learning outcomes:

Knowledge

- Possesses advanced knowledge within the area covered by the Master Programme.
- Possesses specialized insight and good understanding of the research frontier in a selected part of the topic covered by the Master Programme.
- Possesses thorough knowledge of professional and scientific theory and methodology of relevance to the topics covered by the Master Programme.
- Is able to apply the knowledge and understanding from the topics covered by the Master Programme to new and unfamiliar settings.

Skills

- Is able to handle theoretical issues, and solve complex practical problems, independently in the area covered by the Master Programme.
- Is able to use relevant and suitable methods when carrying out research and development activities in the area covered by the Master Programme.
- Is able to critically review relevant literature when solving new or complex problems and is able to integrate the findings into the proposed solution.
- Is able to plan and complete an independent and limited research or development project with guidance and in adherence to research ethics.

General competence

- Is able to analyze relevant ethical issues (technological, professional, and scientific)

Having completed the course, the students should have acquired:

- An understanding of academic writing style and documentation structure.
- The ability to formulate a research problem and research questions.
- An understanding of ethical issues in research.

Emnets temaer:

1. Problem description and choice of methods
2. Identifying, collecting and structuring published research results relevant for the project. Use of library resources
3. Project planning

Pedagogiske metoder:

Forelesninger

Pedagogiske metoder (fritekst):

There are no lectures in the spring semester.

Vurderingsformer:

Vurdering av prosjekt(er)

Vurderingsformer:

Mid term report counts 30%. Final report counts 70%. Each student must hand in his/her own individual report.

To ensure fairness, course deliverable grading will depend on deliverable quantity, quality and the number of contributing students.

Scores can be normalized at the discretion of the instructor/examiner.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Internal examiner will assess the mid term report. The supervisor is required to provide input to the mid term assessment process.

External and internal examiner on the final report.

Utsatt eksamen (tidl. kontinuasjon):

The whole course must be repeated.

IMT3491 Ethical Hacking and Penetration Testing - 2011-2012

Emnekode:

IMT3491

Emnnavn:

Ethical Hacking and Penetration Testing

Faglig nivå:

Bachelor (syklus 1)

Studiepoeng:

5

Varighet:

Høst

Språk:

Engelsk

Anbefalt forkunnskap:

IMT2282 Operating systems

Forventet læringsutbytte:

The course will address the methodology of penetration testing, learning how penetration tests are constructed and experimenting with penetration testing tools in the laboratory. The course will look at vulnerabilities in software both at server and client side, with a high focus on network applications.

The students should after the end of the course have a good overview of how an effective penetration test should take place and of the threats that exists towards software, networks, and network services. A deeper analysis and a set of practical exercises will be the foundation for a deeper understanding into some specific security vulnerabilities that exists.

Emnets temaer:

- Ethical Hacking and Penetration Testing – definitions
- Penetration Testingx Methodologies
- Password attacks
- Privilege escalation
- Network mapping
- Software vulnerabilities
- Web application problems
- XSS, parameters, persistence
- SQLinjection
- Data mining
- Fuzzing

Pedagogiske metoder:

Forelesninger
Gruppearbeid
Lab.øvelser
Oppgaveløsning

Vurderingsformer:

Skriftlig eksamen, 2 timer
Vurdering av prosjekt(er)

Vurderingsformer:

- Written exam (51%), depending on the number of student the exam might be oral
- Project (49%)
- Both parts must be passed

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluation by internal and external examiner

Utsatt eksamen (tidl. kontinuasjon):

- Ordinary re-sit examination
- New project(s) at next course dates

IMT3761 Informasjonskrigføring - 2011-2012

Emnekode:

IMT3761

Emnnavn:

Informasjonskrigføring

Faglig nivå:

Bachelor (syklus 1)

Studiepoeng:

5

Varighet:

Høst

Språk:

Norsk

Forventet læringsutbytte:

Kunnskap

- Forklare hva informasjonskrigføring er
- Formulere hvordan informasjonskrigføring benyttes i krigføring, terrorisme og kriminalitet
- Gjøre rede for hvordan næringsliv og offentlig sektor kan beskytte seg mot informasjonskrigføring

Ferdigheter

- Følge reelle informasjonsoperasjoner
- Avsløre og gjenkalne forsøk på psykologisk manipulasjon
- Velge indikatorer for å påvise at man er utsatt for informasjonskrigføring
- Planlegge og tilrettelegge for beskyttelse av bedrifter eller organisasjoner mot informasjonskrigføring

Generell kompetanse

- Anerkenne samfunnets avhengighet av informasjonssystemer og at denne avhengigheten gjennom psykologisk manipulering, etterretning og målrettet ødeleggelse kan brukes til å utøve makt overfor enkeltpersoner, grupper og nasjonalstater
- Ta ansvar for beskyttelse av bedrifter eller organisasjoner i tråd med juridiske føringer

Emnets temaer:

- Informasjonskrigføringens terminologi og innhold
- Cyber space som operasjonsmiljø
- Våpen som brukes i informasjonskrigføring
- Introduksjon til psykologien bak manipulering
- Kunnskapsledelse (knowledge management)
- Verdivurdering
- Kunnskapsbaserte cyber-operasjoner

Pedagogiske metoder:

Forelesninger
Gruppearbeid

Vurderingsformer:

Skriftlig eksamen, 3 timer

Læremidler:

Depending on the particular agreed upon topic

Supplerende opplysninger:

This course is intended for students who want to work independently on a particular topic of his/her interest. The student needs to find a supervisor by him/herself. The supervisor and the student will need to agree on a topic together. Topics can be for example (list is not exclusive):

- * studying a particular topic from literature
- * investigating a particular open research problem
- * performing experiments on a research topic

In general the student will write a report on his studies or findings that can be evaluated either by the supervisor or by an external examiner. Another option for the evaluation could be writing an article for a publication or a presentation at a conference or an oral exam with the supervisor or a third person.

Students are not allowed to take both IMT4881 Specialization course 5 ECTS and IMT4882 Specialization course II 10 ECTS (either IMT4881 or IMT4882).

IMT4671 Organizational and Human Aspects of Information Security - 2011-2012

Emnekode:

IMT4671

Emnnavn:

Organizational and Human Aspects of Information Security

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

First half of semester

Språk:

Engelsk

Anbefalt forkunnskap:

Basic understanding of risk analysis and risk assessment. Basic knowledge in technical configuration of security devices such as firewall, IDS, IAM etc.

Forventet læringsutbytte:

In general, this course gives a very practical view of the main task of a corporate security office. The experience of the security office of more than five fortune 500 enterprises is woven in the content and exercises and project work. The influence of the corporate security office on security implementation and configuration will be studied using typical real situations.

Having completed the course, the student should have

- A sound understanding of corporate organisations and policies, and how the security is embedded into organisation, processes and corporate documentation framework. He/she will be able to plan the set of required security documentations and to implement enterprise specific security organisation and security policies
- an understanding practical awareness and the ability to plan a corporate awareness campaign
- an understanding of security culture and its meaning. The student will be enabled to describe a target security culture and to make an implementation plan for a turn around
- the ability to distinguish between responsibility and delegation. The student will be enabled to provide security in an unfriendly environment with budget constraints and “lack of enthusiasm” for security.
- an understanding of security strategy, security innovation process and its implementation.
- an understanding of future research topic identification and its processes as implemented in European Commission (www.parsifalproject.eu www.ci2rco.org)

Emnets temaer:

The course will cover a selection the following or similar topics

- overview of practical information security management with special focus on human and organisational aspects
- case studies of practical information security policy, strategy, culture, organisation
- defining the various key roles in corporate security management and how they interact
- planning of key elements of corporate security framework
- Security innovation process in enterprises and research.

Andre halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:

The course contributes towards the following learning outcomes:

Knowledge

- Possesses advanced knowledge within the area covered by the Master Programme.
- Possesses specialized insight and good understanding of the research frontier in a selected part of the topic covered by the Master Programme.

Skills

- Is able to analyze existing theories, methods and interpretations and to challenge established knowledge and practice in the media technology area.
- Is able to use relevant and suitable methods when carrying out research and development activities in the area of media technologyF4: Is able to critically review relevant literature when solving new or complex problems and is able to integrate the findings into the proposed solution.
- Is able to plan and complete an independent and limited research or development project with guidance and in adherence to research ethics.

Having completed the course, the students should have:

- advanced level of understanding of assumptions and models on which risk analysis methods are based .
- deep understanding of how different assumptions/models influence outcomes of different risk analysis methods.

Emnets temaer:

- Classifications of Risk Management methods
- Examples of Risk Management Methods.
- Decision theory
- Risk, Threat and vulnerability discovery
- Uncertainty
- Game theory

Pedagogiske metoder:

Forelesninger

Oppgaveløsning

Depending on the particular agreed upon topic

Supplerende opplysninger:

This course is intended for students who want to work independently on a particular topic of his/her interest. The student needs to find a supervisor by him/herself. The supervisor and the student will need to agree on a topic together. Topics can be for example (list is not exclusive):

- * studying a particular topic from literature
- * investigating a particular open research problem
- * performing experiments on a research topic

In general the student will write a report on his studies or findings that can be evaluated either by the supervisor or by an external examiner. Another option for the evaluation could be writing an article for a publication or a presentation at a conference or an oral exam with the supervisor or a third person.

Students are not allowed to take both IMT4881 Specialization course 5 ECTS and IMT4882 Specialization course II 10 ECTS (either IMT4881 or IMT4882).

Knowledge

The candidate possesses advanced knowledge in detection and prevention of intrusions in modern computer systems and networks.

The candidate possesses thorough knowledge about theory and scientific methods relevant for intrusion detection.

The candidate is capable of applying his/her knowledge in new fields of intrusion detection and prevention.

Skills

The candidate is capable of analyzing existing theories, methods and interpretations in the field of intrusion detection and working independently on solving theoretical and practical problems.

The candidate can use relevant scientific methods in independent research and development in intrusion detection.

The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in the field of intrusion detection and prevention.

The candidate is capable of carrying out an independent limited research or development project in intrusion detection under supervision, following the applicable ethical rules.

General competence

The candidate is capable of analyzing relevant professional and research ethical problems in the field of intrusion detection.

The candidate is capable of applying his/her knowledge and skills in new fields, in order to accomplish advanced tasks and projects.

The candidate can work independently and is familiar with terminology in the field of intrusion detection and prevention.

The candidate is capable of discussing professional problems, analyses and conclusions in the field of intrusion detection and prevention, both with specialists and with general audience.

The candidate is capable of contributing to innovation and innovation processes.

Emnets temaer:

1. Definition and classification of IDS systems
2. Basic elements of attacks against computer networks and their detection
3. Misuse-based IDS
4. Anomaly-based IDS
5. Testing IDS and measuring their performances

IMT4621 Biometrics - 2011-2012

Emnekode:

IMT4621

Emnnavn:

Biometrics

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Varighet (fritekst):

First half of spring semester

Språk:

Engelsk

Anbefalt forkunnskap:

The course content will be complementary to the course IMT4721 "Authentication".

Forventet læringsutbytte:**Knowledge:**

The candidate possesses advanced knowledge in Biometrics.

The candidate possesses thorough knowledge about theory and scientific methods relevant for design, development and operation of biometric access control systems.

The candidate is capable of applying his/her knowledge in new fields of IT-security systems.

Skills

The candidate is capable of analyzing existing theories, methods and interpretations in the field of biometrics and working independently on solving theoretical and practical problems.

The candidate can use relevant scientific methods in independent research and development in biometrics.

The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in biometrics.

The candidate is capable of carrying out an independent limited research or development project in biometrics under supervision, following the applicable ethical rules.

General competence

The candidate is capable of analyzing relevant professional and research ethical problems in biometrics.

The candidate is capable of applying his/her biometric knowledge and skills in new fields, in order to accomplish advanced tasks and projects.

The candidate can work independently and is familiar with biometric terminology.

The candidate is capable of discussing professional problems, analyses and conclusions in the field of biometrics, both with specialists and with general audience.

The candidate is capable of contributing to innovation and innovation processes.

Objectives:

After the course, the students should have acquired:

1. Knowledge about common statistical tools for biometrics
2. Insight into advantages and disadvantages of biometric characteristics
3. Understanding of multimodal biometrics
4. Knowledge of ethical and privacy issues in biometrics.
5. Understanding of the threats and protection mechanisms for biometric data

Emnets temaer:

- Fingerprint recognition
- Vein recognition
- Face recognition specifically focused on three dimensional data
- Iris recognition
- Multimodal biometrics
- Attack mechanisms
- Privacy Enhancing Technologies

Content

In this course, several key aspects of biometrics are covered. The course begins with an overview of applied statistics and hypothesis tests as well as other common statistical tools for biometrics, and then covers selected biometric concepts, particularly fingerprint recognition, vein recognition, face recognition and iris recognition. To this end, the relevant physiological characteristics, their variability, and potential problems are discussed before analyzing different approaches for each of the attributes to be investigated. In each case, not only benign applications are covered but also potential bottlenecks such as insufficient sample quality along the entire processing chain. The use of multi-biometrics including data fusion is discussed both in the context of robustness against attacks and improving the overall accuracy of the recognition process. The course continues with a discussion of the ethical and privacy-related issues in biometrics, along with possible limitations and technical mitigation mechanisms. Special attention is given to privacy enhancing technologies that provides protection of sensitive biometric data. In this line the course concludes with comparison-on-card approaches and template protection concepts that allow revocation of biometric references.

IMT4612 Machine Learning and Pattern Recognition I - 2011-2012

Emnekode:

IMT4612

Emnnavn:

Machine Learning and Pattern Recognition I

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Språk:

Engelsk

Anbefalt forkunnskap:

Expected prior-knowledge: Understanding of basic statistics like probability density function, variance, etc. Basic analysis and matrix algebra. Digital image Processing with Mathlab (a student should be able to do some basic manipulations of images)

Forventet læringsutbytte:

This course develops understanding of use of statistical analysis for multidimensional data. It also give fundamentals to understand data analysis from raw measurement values to higher level decision making in color and image context. The course develops basic understanding for difference between analysis with or without a priori data as well as ways to evaluate results. The methods will be learned in practical sessions, where they will be programmed and tested with real data. The course is practice oriented, where students learn basics of data analysis useful in color, color image and spectral image analysis and processing. In lectures basics of methods are lectures and in practical session, their usage is practices. The aim is not to get deep theoretical understanding and derivation of methods.

On completion of this course the students will be able to:

- Understand principles how multidimensional statistical methods differ from one dimensional methods.
- Program some basic clustering and classification methods and test their validity.
- Program some basic Neural networks methods and test their validity.
- Extract features from raw, measured values of data to be analysed.
- Understand the distribution of information in statistical analysis and meaning in data representation.
- To apply basic statistical and data analysis methods to color and image data.

Emnets temaer:

Basics of multidimensional statistical analysis.

- Principal component analysis.
- Data classification: Bayesian classifier, k-NN classifier, basics of neural networks.
- Data clustering: k-means clustering, Self-Organizing map.
- Classification and clustering validity testing: leave-one-out, ground truth.

Practical Laboratory Sessions:

- Write spectral color and image data reading and writing routines by Matlab
- Produce PCA component images and reconstruct spectral images from PCA eigenimages
- Realize some classification methods by Matlab
- Realize some clustering methods by Matlab
- Make simple tests of spectral image segmentation, spectral image categorization etc. using learned methods

Pedagogiske metoder:

5

Varighet:

Høst

Varighet (fritekst):

First half of the autumn semester

Språk:

Engelsk

Forventet læringsutbytte:
Knowledge

- The candidate possesses advanced knowledge in classical cryptography, as well as fundamentals of stream ciphers, block ciphers and public key ciphers.
- The candidate possesses thorough knowledge about theory and scientific methods relevant for cryptology.
- The candidate is capable of applying his/her knowledge in new fields of cryptology.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations in the field of cryptology and working independently on solving theoretical and practical problems.
- The candidate can use relevant scientific methods in independent research and development in cryptology.
- The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in cryptology.
- The candidate is capable of carrying out an independent limited research or development project in cryptology under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in cryptology.
- The candidate is capable of applying his/her cryptographic knowledge and skills in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with cryptographic terminology.
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of cryptology, both with specialists and with general audience.
- The candidate is capable of contributing to innovation and innovation processes.

Emnets temaer:

1. Classical cryptography - history of cryptography, fundamentals of information theory and its application in cryptography
2. Symmetric ciphers - stream and block ciphers
3. Asymmetric ciphers - fundamentals, RSA
4. Hash functions and digital signatures.

Anbefalt forkunnskap:

Expected prior-knowledge: Understanding of basic statistics like probability density function, variance, etc. Basic analysis and matrix algebra. Digital image Processing with Mathlab (a student should be able to do some basic manipulations of images)

Forventet læringsutbytte:

This course develops understanding of use of statistical analysis for multidimensional data. It also give fundamentals to understand data analysis from raw measurement values to higher level decision making in color and image context. The course develops basic understanding for difference between analysis with or without a priori data as well as ways to evaluate results. The methods will be learned in practical sessions, where they will be programmed and tested with real data. The course is practice oriented, where students learn basics of data analysis useful in color, color image and spectral image analysis and processing. In lectures basics of methods are lectures and in practical session, their usage is practices. The aim is not to get deep theoretical understanding and derivation of methods.

On completion of this course the students will be able to:

- Understand principles how multidimensional statistical methods differ from one dimensional methods.
- Program some basic clustering and classification methods and test their validity.
- Program some basic Neural networks methods and test their validity.
- Extract features from raw, measured values of data to be analysed.
- Understand the distribution of information in statistical analysis and meaning in data representation.
- To apply basic statistical and data analysis methods to color and image data.

Emnets temaer:

Basics of multidimensional statistical analysis.

- Principal component analysis.
- Data classification: Bayesian classifier, k-NN classifier, basics of neural networks.
- Data clustering: k-means clustering, Self-Organizing map.
- Classification and clustering validity testing: leave-one-out, ground truth.

Practical Laboratory Sessions:

- Write spectral color and image data reading and writing routines by Matlab
- Produce PCA component images and reconstruct spectral images from PCA eigenimages
- Realize some classification methods by Matlab
- Realize some clustering methods by Matlab
- Make simple tests of spectral image segmentation, spectral image categorization etc. using learned methods

Forventet læringsutbytte:

Calder and Watkins define IT Governance as "the framework for the leadership, organizational structures and business processes, standards and compliance to these standards, which ensures that the organization's information systems support and enable the achievement of its strategies and objectives". IT Governance is of crucial importance for organizations owing to the need to best safeguard critical information and, through the increasing requirements from national and international regulations. Central to IT Governance in Europe is the ISO 27001 / ISO 27002 standard.

This course provides an overview of IT Governance and the basic concepts of the ISO 27001 / ISO 27002 standard.

The candidate should after attending the course

- fully understand the main principles of IT Governance.
- fully understand the basic concepts of the ISO 27001 / ISO 27002 standard
- master the principles for designing & implementing an ISO 27001 ISMS
- be fully aware of the difference between security technology and the management of secure systems
- have a thorough understanding of security management as a continuous improvement process.
- possess awareness of security certification schemes (BS7799, ISO 15408, ...)

Emnets temaer:

- Reasons for IT Governance: Compliance, liability, stability
- Organizing information security
- Information security policy and scope
- The risk assessment and statement of applicability
- Identification of risks related to external parties
- Asset management
- Human resources security
- Physical and environmental security
- Equipment security
- Communications and operations management
- Controls against malicious software (malware) and back-ups
- Network security management and media handling
- Exchanges of information
- Electronic commerce services
- E-mail and internet use
- Access control
- Network access control
- Operating system access control
- Application access control and teleworking
- Systems acquisition, development and maintenance
- Cryptographic controls
- Security in development and support processes
- Monitoring and information security incident management
- Business continuity management
- Compliance
- Principles of auditing

Pedagogiske metoder:

Annet

Pedagogiske metoder (fritekst):

Lectures, exercises and projects.

Vurderingsformer:

Annet

Vurderingsformer:

- 1-2 Multiple Choice Tests (weight: 20%)
- 1-2 group Assignments (weight: 30%)
- Digital Final exam, 2 hours (weight: 50%)
- All three parts are mandatory and must be passed!

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by the lecturer

Utsatt eksamen (tidl. kontinuasjon):

For the final exam: Ordinary re-sit examination.

Tillatte hjelpeemidler:**Obligatoriske arbeidskrav:**

None.

Ansvarlig avdeling:

Avdeling for informatikk og medieteknikk

IMT4591 Rettslige aspekter ved informasjonssikkerhet - 2011-2012

Emnekode:

IMT4591

Emnenavn:

Rettslige aspekter ved informasjonssikkerhet

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Språk:

Norsk, alternativt engelsk

Forventet læringsutbytte:

Knowledge

- The candidate possesses advanced knowledge in legal aspects especially relevant for information security. This applies particularly to the legal regulation of matters of importance to safeguarding confidentiality, integrity, access and quality.

Skills

- The candidate is capable of performing critical analysis of various literature sources regarding legal aspects of information security.
- The candidate is capable of carrying out an independent limited research or development project in legal aspects of information security under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in legal aspects of information security.
- The candidate is capable of applying his/her knowledge about legal aspects of information security in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with legal terminology.

Emnets temaer:

Generelle bestemmelser om informasjonssikkerhet, særlig innenfor e-forvaltning

Sikring av personopplysninger ved innsamling, bearbeiding og lagring av opplysninger

Regler for elektronisk kommunikasjon

Pedagogiske metoder:

Forelesninger
Gruppearbeid
Oppgaveløsning
Samling(er)/seminar(er)

Vurderingsformer:

Skriftlig eksamen, 3 timer

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Intern + ekstern sensor

Utsatt eksamen (tidl. kontinuasjon):

Ingen ordinær kontinuasjon
