Zoom +  
Panopto = ❤️

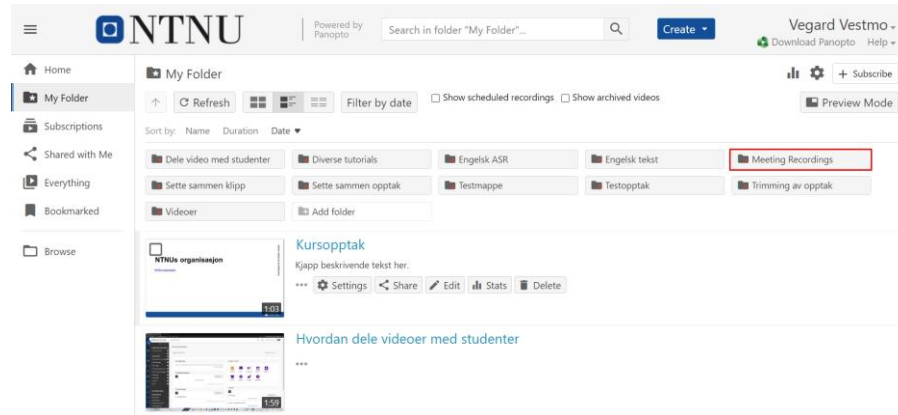

# The two main integrations between Zoom and Panopto that we'll have a look at today:

- Cloud recordings done in Zoom
- Automatic sharing and routing of scheduled Zoom meetings

# Zoom cloud recordings

- Cloud recordings are stored in your “My Folder” in Panopto instead of on your local harddrive.
- These can easily be shared with other users.

# Automatic sharing and routing of scheduled Zoom meetings

- Panopto users can set up automatic routing rules for any recurring Zoom meeting ID. This directs the recorded Zoom session to a specified folder. The folder may be shared with other users in advance, so meetings will be automatically available to those users.
