

Online presentation of the EiT village

WHAT, WHY and HOW

Challenge

Plastic waste has reached all the world's oceans, fuelled by many million **additional** pieces of plastic pollution entering the seven seas **every day**. Macroplastics cause entanglement and starvation by clogging the digestive tracts of animals and birds; microplastics are ingested by smaller marine life and are passed up the food chain; while nanoplastics can penetrate barriers in the digestive tract and migrate into mussel- and brain-tissue. Clearly, we must **reduce** the flow of plastic into the oceans, **retrieve** what's already there, and **recycle** used plastics into valuable raw materials! But how? By whom? And who will pay for the effort?

Arktis

Utnyttelse av Arktisk ressurser og utvikling av Arktisk infrastruktur. Hvorfor? (eller hvorfor ikke?), Hva? Og Hvordan?

Landsbyen handler om ressurser og infrastruktur i Arktis og i kaldt klima. Første spørsmål er politisk, og dreier seg om vi skal utnytte Arktis og bygge infrastruktur? I Antarktis er det svært begrenset hva man kan gjøre, for at forskning kan foregå så må det bygges og drives infrastruktur, og det blir da viktig at denne bygges og drives på en måte som er forenelig med gjeldene internasjonale avtaler. For eksempel er næringsvirksomhet tillatt? Skal det åpnes for turisme og forskning osv. Andre spørsmål er hvilken form næringsvirksomhet, turisme, forskning osv. skal ha. Og siste spørsmål kan være hvordan sikre dette og planlegge, bygge og drive infrastruktur.

The future of your meal

We live in a time when we cannot predict the near future regarding health or transport. And are we able to predict the future of our food? Is the current trend of sustainable development really needed? Should we all become vegetarians? Or maybe only buy food from regional farmers? This village will answer these and other questions about the future of your meal in terms of a single organism (biology, chemistry, medicine), a group of people (agriculture, food, transport) or the global society (economy, sociology).

Making money from waste

Is the stuff we throw out worth anything?

Circular Economy

Femten somre og syv vintre lagret i grunnen - energilagring

Lagring av varme og kjøling i grunnen blir en viktig brikke i det grønne puslespillet framover. Vil du være med å bidra?

Energilagring i grunnen

- Energilagring i grunnen handler om å lagre varme og i noen tilfeller kjøling i bakken. Varmen eller kulden tas ut igjen ved behov enten i lengre (sesong/årstid) eller kortere (timer/døgn) perioder.
- Framtidens fornybare energisystem blir mer komplisert, og krever et samspill mellom mange teknologier. Det er viktig å finne ut hvordan energilagring i grunnen kan bidra i dette samspillet for trygg og pålitelig energiforsyning.
- Energilagring i grunnen krever kompetanse i mange fagområder, og godt samarbeid er avgjørende for å lykkes med å utvikle lokale energisystemer av ulike størrelser og til ulike formål (bygg, industri, lokalt, regionalt, nasjonalt)

Fortalt digitalt

I landsbyen **Fortalt Digitalt** utvikles prosjekter som utforsker nye måter å fortelle på, med digital medieteknologi som verktøy.

Online presentation of the EiT village

WHAT

What do we mean by an online presentation of the EiT village? **This a webpage presenting the village, with a particular focus on the overall topic for the project work in the village (village theme), for the students.**

Village theme:

- The village supervisor decides the overall topic for the village, and each of the student teams in the village is to define a project within this overall topic. It is an aim that each student can use his/her academic competence in the project.
- Through the process of finding a joint project, and during the work on the project, the students gain experience of working with people who have a different academic background than themselves. These experiences are the starting point for the development of interdisciplinary teamwork skills. In order to have a good interdisciplinarity in the villages, the village theme should therefore be open and interdisciplinary, so that it attracts to students from many different subject areas.
- The village theme should also be related to relevant problem areas from society and working life, and be linked to actors in society that the students can relate to during the project work.

Online presentation of the EiT village

WHY

The online presentation is one of the most important tools you have for recruiting students to your village. The students choose 5 villages they wish to join - and get a place in one of these. The students get to know the villages by reading about the online presentations of these. The presentation should inspire the students to choose your village, so it may be worthwhile to make an effort to create the presentation.

The students register their village priorities via Studentweb in the period October 1 – November 1. They submit a ranked list of the five villages they would most like a place in.

The faculties/departments decide what type(s) of village(s) the students may choose

History	Yes	Yes
Language and communication in professions	Yes	No
Musicology	No	Yes
Music Performance	Yes	Yes
Philosophy	Yes	Yes
Religious Studies	Yes	Yes
Scandinavian Language and Literature Studies	Yes	Yes
Science and Technology Studies (STS)	Yes	No
Faculty of Medicine and Health Sciences (MH)	May choose intensive villages?	May choose semester-based villages?
MSc Physical Activity	Yes	No
Pharmacy	Yes	No
Global Health	Yes	No
Clinical Health Science	Yes	No (Possible in some cases, contact institute.
Medical Studies	Yes	Yes
Molecular Medicine	Yes	No
Neuroscience	Yes	No
Public Health Trondheim	Yes	No (Part time students: Yes)
Public Health Gjøvik	No	Yes
Faculty of Architecture and Design (AD)	May choose intensive villages?	May choose semester-based villages?
Architecture	Yes	No
Fine Art	Yes	Yes
Industrial Design Engineering	No	Yes
Interaction design ENG Gjøvik	No	Yes
Physical Planning	No	Yes

It is therefore not the case that students from all study programs have the opportunity to choose your type of village.
[An overview of the type of villages students from different study programs can choose](#) can be found on the EiT webpages.

Distribution of students from different faculties in villages in the spring of 2022

Faculty	Semester-based Norwegian	Semester-based English	Intensive Norwegian	Intensive English
AD	63	45	57	29
HF	22	7	92	13
IE	527	233	25	18
IV	329	191	29	17
MH	13	1	148	88
NV	176	118	44	24
SU	49	8	242	67
ØK	215	75	97	20

AD = Faculty of Architecture and Design, **HF** = Faculty of Humanities, **IE** = Faculty of Information Technology and Electrical Engineering, **IV** = Faculty of Engineering, **MH** = Faculty of Medicine and Health Sciences, **NV** = Faculty of Natural Sciences, **SU** = Faculty of Social and Educational Sciences, and **ØK** = Faculty of Economics and Management

Composition of students / faculty in the spring of 2022 - average for different village types

Semester-based

■ ØK ■ AD ■ HF ■ IE ■ IV ■ MH ■ NV ■ SU

ØK = Faculty of Economics and Management, **AD** = Faculty of Architecture and Design, **HF** = Faculty of Humanities, **IE** = Faculty of Information Technology and Electrical Engineering, **IV** = Faculty of Engineering, **MH** = Faculty of Medicine and Health Sciences, **NV** = Faculty of Natural Sciences, and, **SU** = Faculty of Social and Educational Sciences.

The title is important!

- Title = the name of the village (what is behind the subject code of the diploma at the end)
 - Example: AM500118 Future Jobs
- **An exciting title is often decisive for whether the students click in and read the rest of your online presentation.** Some students also choose a village based only on the title, without spending time reading the online presentation.
- In order to have a broad interdisciplinarity in the village, the title itself should appeal to students from different subject areas.

Some examples of villages many students have applied to:

- Space technology - Satellites, future space travel, and potatoes on Mars [Romteknologi - Satellitter, fremtidens romreiser, og poteter på Mars]
- Automation and society [Automatisering og samfunnet]
- Sports technology [Idrettsteknologi]
- Hydrogen in transportation for a safe and sustainable future
- Your DNA and you - who owns the information and what can it be used for? [Ditt DNA og deg - hvem eier informasjonen og hva kan den brukes til?]
- Virtual and augmented reality (VR / AR) in learning and training [Virtuell og utvidet virkelighet (VR/AR) i læring og trening]
- Use of AI and big data for sustainable development [Bruk av AI og stordata for bærekraftig utvikling]
- Creating value from waste
- Green Maritime Future: We create it [Grønn maritim framtid: Vi skaper den]

Examples that can be inspiring. (Based on figures from the academic year 2021/2022).

**Some examples of villages that students from
many different study programs have applied to:**

- Responsible AI and welfare
- Automation and society [Automatisering og samfunnet]
- Ocean Justice
- Nanomechanics
- Architecture for non-architects [Arkitektur for ikke-arkitekter]
- Communication [Kommunikasjon]
- Climate-neutral, inclusive, beautiful & sustainable Nyhavna
- Energy challenges for a sustainable future [Energiutfordringer for en bærekraftig framtid]
- Sound, people and nature [Lyd, mennesker og natur]
- Creating the food of the future using by-products [Å skape fremtidens mat ved hjelp av biprodukter]

Examples that can be inspiring. (Based on figures from the academic year 2021/2022).

Online presentation of the EiT village

HOW

On NTNU's intranet (Innsida) there is a web page for village supervisors in EiT. On this page, you will find a template for creating online presentations: <https://i.ntnu.no/wiki/-/wiki/English/Experts+in+Teamwork+-+for+village+supervisors>. As an alternative to following the link above, you can use the search function on Innsida to find the pages about EiT.

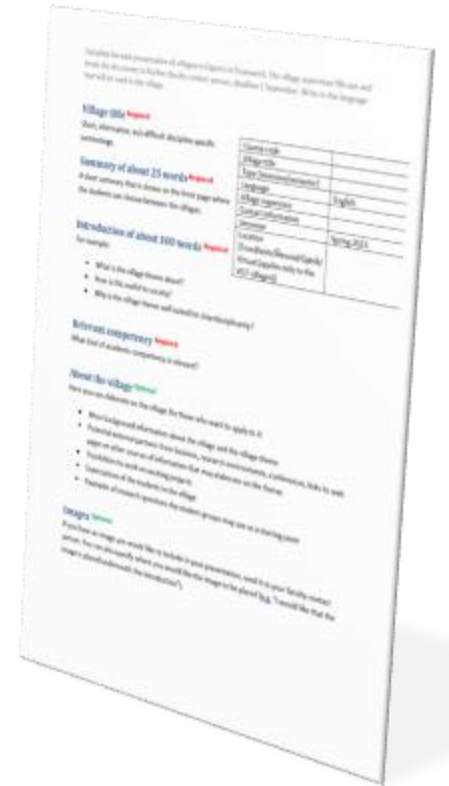

The template you use is created to standardize the process of developing and publishing the online presentations. It is advantageous to have a standard procedure, since it makes it easier for students to compare each village, as well as making sure that the process of publishing presentations online goes as smooth as possible.

You fill out the template and send it to your EiT contact person at your faculty. You find contact information on page 2 in the template, or the main page for EiT on Innsida.

Deadline to submit a filled out template is September 1. Students choose villages in the period October 1 – November 1.

Building blocks of an online presentation - part 1

- **Village title**
- **Short summary of about 25 words.** Shown on the front page where students can choose between villages.
- **Brief introduction of about 100 words.** What is the theme about? In what ways is it beneficial to society to explore this further? Why is the theme well-suited for interdisciplinarity and different perspectives? The intention is that students reading the presentation quickly can see what opportunities lie in choosing just this village.
- **Relevant expertise.** The part about relevant expertise is more demanding, since mentioning some academic disciplines can lead to students from other fields feeling excluded. We recommend that you reach out to, and invite from, as many academic disciplines as possible. This can be done in many different ways, so feel free to read last year's presentations online for inspiration.

Building blocks of an online presentation

- part 2

- **Additional info about the village.** Here you can say something about the origins of the village and mention external partners, if any. Many businesses, institutions and organizations are external partners every year. Once again: Read presentations already online to see the breadth of external partners in EiT.
- **Using images.** Images are very important to make the online presentation attractive. If you have one or more images you would like to include in your presentation, please send these to the contact person at your faculty. Write in the template where you want the images to be placed (e.g. «is placed under the introduction»). Just remember to have permission to publish the images you would like to use, and to give credit to the photographer.
- **Practical information** is filled out in the matrix to the right.

Template for online presentation of village EiT project in framework. This village experience file can and must be used to fulfill the evaluation process. Deadline: 1 November. Write in the template!

Village title *Example*
Short, alternative, not official description specific to village.

Summary of about 25 words *Example*
A short summary that is shown on the first page where the students can choose between the villages.

Introduction of about 100 words *Example*
For example:
• What is the village theme about?
• How is this related to reality?
• Why is the village theme well suited for interdisciplinary?

Relevant competency *Example*
What kind of academic competency is shown?

About the village *Example*
Here you can describe the village for those who want to apply to it.
• Short background information about the village and the village theme
• Possible external partners from business, research, administration, culture, etc. who help you in the realization of the village theme
• Description of the students in the village
• Examples of research questions the student groups may use as a starting point

Images *Example*
Indicate in which image you want this to be included in your presentation and in your faculty market where these images should be used and you would like the image to be placed (e.g. "I would like that the image is placed in the introduction").

Feedback on the online presentation of the village

It is completely up to you if you want feedback on your online presentation, but it could prove useful to get other perspectives on it before you complete it. Feel free to reach out to colleagues, village supervisors and/or students you know – from your own or other disciplines, if you have the opportunity.

Ask for feedback on the title in particular, but also the content of the presentation. Suggested question: *What makes the title, and perhaps content, either appealing or not to students from different academic fields?*

Good luck on your online presentation!

Need more information?

- Overview of [tasks, seminars and important dates](#) for village supervisors in EiT.
- [Information meeting about Experts in Teamwork](#) September 29 at 14:15-15:15 (English) and 13:00-14:00 (Norwegian).
- The handbook for the teaching staff («The EiT book») gives supplementary information and a foundation for planning and teaching the village.
- Please send e-mail to kontakt@eit.ntnu.no if you have any questions.
